COMICCRAFT

Phase 3 - Project Design Phase

The design of ComicCraft defines how the different parts of the application work together.

Main components:
• User Interface – accepts user input and displays the result.
• Application Layer – handles the project logic and requests.
• Processing Layer – processes story and comic information.
• Output Layer – prepares and displays the generated comic content.

Basic workflow:
User Input → Flask Application → Story/Content Processing → Comic Output → Display to User.

The design keeps the application modular so that individual parts can be maintained and improved.
