COMICCRAFT

Phase 5 - Project Development Phase

During development, the ComicCraft application is implemented using the planned design.

Development activities include:

- Setting up the project environment.
- Creating the Flask application.
- Preparing the required project files and folders.
- Implementing the application logic.
- Connecting the user interface with the application.
- Processing user input and generating the required output.
- Running the application and correcting implementation errors.

The development phase converts the planned design into a working application.
